TO: Users of the Fall 1986 Stumpage Price Report
FROM: Utilization & Marketing Forester
SUBJECT: Comments on the Log Markets

Log inventories in most pine mills are at what some mill managers are saying is even worse than the winter of 1980. A lack of logs in the yards prompted me to question some of those mill operators with low inventories and the answers given are in some cases disturbing.

The most common reply to the question of "where have all the white pine logs gone" is "to Canada". Or the "butts and best second (logs) are going to Canada and we get what's left." Or "so and so (a Maine mill) is getting the best and we get the rest."

The loggers I have talked to are saying two things: The availability of good pine lots seems limited because people with good lots are holding on to them, and the grading rules at the mills that use them are causing the loggers to lose money over previous years when that mill did not grade logs.

The former comments, about people holding on to their good pine lots, is what I advised you to do because log prices will rise and then you can thin your lot (or harvest it if your management plan calls for that treatment) and benefit from higher stumpage prices. I have seen higher pine log prices but the majority of the prices that catch your eye are for the highest pine grade. There have been increases in the lower grades and also increases at the mills buying wood log run. Higher stumpage prices may not have been offered to the landowners as yet (the statewide pine log average dropped \$2 over Spring of '86) and that could be a reason people are holding on to their woodlots.

The latter comment from the loggers, about the apparent loss of money on graded vs. woods run log prices is causing mill operators to examine their log grades in detail. I have seen \$300 (plus bonuses) for select pine logs in several areas of the state. The bonuses add substantial incentive for supplying substantial amounts of logs. All that glitters is not gold however. There is only a small percentage (1 to 11% depending upon which area of Maine you are discussing) of select logs. Some mills claim that only #3 logs are left and as they produce standard grade lumber (which is presently 'another' drug on the market) they don't offer much for this kind of log.

If you have a woodlot and are having loggers approach you about cutting your lot, you must realize that there's something there of value. Now where do you go from here? You can attempt to play the market and hope for even higher stumpage prices, you could hire a registered professional forester to advise you

on what to do or you can sell the stumpage. The latter category has a new twist in that normally the majority of the stumpage sold in Maine is sold to a logging contractor who in turn sells the products he harvests to mills using those products. I am hearing of sawmill representatives looking at lots and offering the landowner stumpage prices and then the sawmill hires a logger to do the cutting. This method assures the mill that they will receive all the logs due them.

Whichever way you choose to do business it certainly is becoming a sellers market for quality logs.

Otherwise certain products show activity (notably hemlock logs) that have been notably inactive in the past. Hardwood veneer logs are capturing higher and higher prices while the remainder of the tree becomes harder and harder to sell. I am trying to create a list of hardwood veneer mills and also log buyers to be published in a future issue. These folks may have new markets for your hardwood veneer quality logs.

In the meantime, the stumpage owner is heading into a catch 22 situation. Higher stumpage combined with the possibility of local mills not running are uncomfortable opposites.

If your product does not appear in your zone, please check adjacent zones for prices.

Seasons Greetings

A handwritten signature in dark ink, appearing to read "Peter Jannet". The signature is fluid and cursive, with a long horizontal stroke extending to the right.
